

Better Nutrition For

BEEF PRODUCTION

Since 1964 New-Life Mills has sourced the highest quality ingredients for our animal feed programs. Our customers expect optimal growth and production from their livestock - it's what we strive for and the reason we've been in business for 50 years.

Beef Cows benefit from high quality feed programs which facilitate your herds growth through:

Reproduction - Optimizing health for better breeding.

Gestation - Healthy gestation for a healthier cow and calf.

Lactation - Speedy recover from birth & optimal nutrition for efficient calf growth.

Calves need to be strong and healthy. Early nutrition is paramount to building the body and the immune system to improve animal efficiency and performance.

Replacement Heifers are the future of calf production. Making sure she is ready for a strong reproductive cycle with a well rounded nutrition program, combined with on-farm forage/pasture is critical to supporting long term beef production.

Feedlot Steers/Heifers are your profit center and we take that very seriously. Optimal nutrition, based on today's economics, will yield higher returns.

Strong nutritional programs to support sustainable and profitable beef farms...
