To Whom It May Concern:

This is to certify that all New-Life Mills facilities in Canada are FeedAssure™ HACCP certified by ANAC (Animal Nutrition Association of Canada) through third party auditors SGS Canada. This certification demonstrates our commitment to the highest standards of feed/feed ingredient quality.

FeedAssure™ is a comprehensive feed safety management and certification program developed for the Canadian feed industry. Certification and membership under FeedAssure™ requires that each facility pass an annual third-party audit of its HACCP system.

HACCP (Hazard Analysis Critical Control Points) is a food safety program designed to identify and minimize risks through the implementation of Good Manufacturing Practices (GMP's) thereby, creating the foundation for our HACCP program.

GMP's involve comprehensive steps to reduce feed safety risk at each manufacturing facility. These steps include documented and regular assessment at all parts of the premises, in storage and receiving areas and in feed transportation. It also includes pest control, testing of scales, daily reconciliation of medications, microbiological testing and personnel training. In conjunction with the above, New Life Mills has a comprehensive Quality Control program to ensure feed/feed ingredient quality and safety for livestock and poultry.

Every substance and action, in the production of feed, including raw ingredients, sanitation, manufacturing, shipping and employee training complies with strict guidelines and procedures in order to produce products that are safe for consumption. Any pharmaceuticals added have been listed on the feed slip. To the best of our knowledge; this feed has been manufactured in an environment free of SE.

You can take comfort and pride in the fact that the products you purchase from New-Life Mills have been manufactured with systematic care and attention to food safety and quality.

Sincerely,

Jennifer McLeod,
Quality Assurance Coordinator
New-Life Mills, a division of Parrish & Heimbecker Limited
